

USED VEHICLE BUYER'S REPORT

Acquisition Targeting & Inventory Health • Trailing 30-Day Sales vs. Current Stock
Prepared for the Used Car Inventory Team • Report date: June 4, 2026

EXECUTIVE SUMMARY

- **Top 3 buy targets: 4Runner** (sells in 13 days, \$9,768 avg total gross), **Sienna** (14 days, \$7,327), and **Tacoma** (trade units turn in 27 days at \$4,641). All three out-gross and out-turn the store and we are **thin** on each.
- **Trade crushes auction.** Trade-acquired units average \$4,518 total gross vs. \$3,429 for auction — a **\$1,088 per-unit gap**. The gap is almost entirely up front: trade front gross \$2,546 vs. auction \$113 (a \$2,433 front swing). Trades also sell faster (31 vs 38 days).
- **\$260,928 in capital is tied up in 7 aged units** (60+ days) — \$263,452 at retail. Every one is an inferred auction/wholesale buy; six of seven are late-model Toyota/Ford trucks & SUVs bought too rich.
- **Fast movers print money.** Units sold in <21 days average \$5,549 total gross vs. \$3,293 for slower units — and carry a \$3,025 front vs. \$662. Speed and gross move together; chase turn, not just price.
- **Stop the bleeding on auction Highlanders & RAV4s.** Auction Highlanders lose -\$2,413 front over 46 days; auction RAV4s run -\$129 front across 15 units. 78% of our 32 negative-front deals were auction buys.

122	\$4,051	34	126	\$260,928
UNITS SOLD / 30 DAYS	AVG TOTAL GROSS	AVG DAYS TO SELL	CURRENT INVENTORY	AGED 60+ CAPITAL

Store averages exclude 4 data-quality outliers (see Methodology). Acquisition-source splits use the sold feed's Source Type; current-inventory source is inferred.

REPORT 1 — VELOCITY (how fast we turn)

Fast movers vs. slow movers

"Fast mover" = sold in under 21 days. Fast units don't just turn quicker — they carry dramatically more front gross, meaning the right car bought right sells itself.

Segment	Units	Avg Days	Avg Front	Avg Back	Avg Total
Fast movers (<21 days)	41	10	\$3,025	\$2,525	\$5,549
Slower movers (21+ days)	81	46	\$662	\$2,631	\$3,293

Velocity by model — Toyota core (ranked fastest to slowest)

Model	Units	Avg Days to Sell	Avg Front	Avg Total	Flag
4Runner	5	13	\$5,035	\$9,768	★ FAST
Prius	4	14	\$2,301	\$3,256	★ FAST
Sienna	4	14	\$3,800	\$7,327	★ FAST
Corolla	4	20	\$521	\$2,969	★ FAST
Crown	3	27	\$1,879	\$2,115	
Tacoma	8	34	\$2,442	\$4,068	
Camry	19	35	\$1,068	\$4,318	
RAV4	17	37	\$295	\$3,635	
Highlander	11	37	-\$434	\$2,488	

Days-to-sell by acquisition source

Source	Units	Avg Days to Sell	% Fast (<21d)
Trade-acquired	63	31 days	43%
Auction / Wholesale	58	38 days	22%

Read: trade-acquired units turn ~7 days faster than auction units and are far more likely to be fast movers. Auction inventory sits longer and erodes front gross while it ages.

Mileage sweet spot — fast vs. slow movers (actual sold mileage)

Segment	Units	Median Miles	Median Yr	Source mix	Median Retail
Fast movers (<21 days)	41	66,426 mi	2021	66% trade	\$29,349
Slower movers (21+ days)	81	46,653 mi	2024	44% trade	\$28,520

The surprise: our fast movers are NOT the low-mileage units — they are **older, higher-mileage trade-ins** (median 66,426 mi, MY2021, 66% trade-sourced) that we bought right and priced to market. The slow movers are **newer, lower-mileage auction units** (median 46,653 mi, MY2024) sitting on thin front gross. Mileage is not the gating factor — **acquisition source and price-to-market are**. Don't shy away from a higher-mile trade that pencils.

Mileage sweet spot by model (Toyota core, median of sold units)

Model	Units	Median Miles Sold	Median Retail	Avg Days
4Runner	5	40,743 mi	\$41,596	13
Prius	4	35,840 mi	\$26,909	14
Sienna	4	80,330 mi	\$38,202	14
Corolla	4	57,492 mi	\$20,911	20

Model	Units	Median Miles Sold	Median Retail	Avg Days
Crown	3	53,575 mi	\$32,630	27
Tacoma	8	35,073 mi	\$36,424	34
Camry	19	46,900 mi	\$26,606	35
RAV4	17	30,314 mi	\$33,064	37
Highlander	11	67,670 mi	\$32,806	37

Within a model, the bands that actually move: **4Runner ~40k mi, Tacoma/Prius ~35k, RAV4 ~30k**, while **Sienna and Highlander** retail fine up to **65k–80k mi**. Buy to the band the nameplate supports rather than chasing the lowest odometer.

REPORT 2 — GROSS PROFIT (front, back & total)

Acquisition-source breakdown — the headline number

Source	Units	Avg Front	Avg Back	Avg Total	Avg Days
Trade-In	63	\$2,546	\$1,972	\$4,518	31
Auction / Wholesale	58	\$113	\$3,317	\$3,429	38
GROSS GAP (Trade – Auction)		\$2,433	-\$1,345	\$1,088	

Trade-in units deliver **\$1,088 more total gross per unit** than auction buys, and the entire advantage is front-end: trades hold \$2,546 front vs. nearly zero (\$113) on auction. Auction relies on back-end (F&I) to stay positive. Every retail-quality trade we keep instead of wholesaling is worth ~\$1,088.

Average gross by model & year range (Toyota core)

Model	Units	Avg Front	Avg Back	Avg Total	Beats Store Avg
4Runner	5	\$5,035	\$4,733	\$9,768	✓
Sienna	4	\$3,800	\$3,527	\$7,327	✓
Camry	19	\$1,068	\$3,249	\$4,318	✓
Tacoma	8	\$2,442	\$1,626	\$4,068	✓
RAV4	17	\$295	\$3,339	\$3,635	
Prius	4	\$2,301	\$955	\$3,256	
Corolla	4	\$521	\$2,448	\$2,969	
Highlander	11	-\$434	\$2,922	\$2,488	
Crown	3	\$1,879	\$236	\$2,115	

Store average total gross = **\$4,051** (front \$1,456 / back \$2,595). Models with ✓ beat it. 4Runner and Sienna are the gross leaders by a wide margin.

Average gross by model-year band (all units)

Year Range	Units	Avg Front	Avg Back	Avg Total
2023-2026	67	\$755	\$3,604	\$4,359
2020-2022	20	\$1,935	\$2,053	\$3,988
2016-2019	26	\$2,286	\$930	\$3,216
2011-2015	9	\$3,212	\$1,104	\$4,317

Average gross by price band (actual retail price)

Price Band	Units	Avg Days	Avg Front	Avg Back	Avg Total	Med. Miles
Under \$20k	25	32	\$2,162	\$1,123	\$3,286	107,700
\$20k–\$30k	39	39	\$552	\$2,719	\$3,271	52,281
\$30k–\$40k	40	36	\$1,250	\$2,994	\$4,244	30,573
\$40k–\$50k	8	31	\$1,042	\$3,436	\$4,478	36,667
\$50k+	2	12	\$8,095	\$10,659	\$18,754	26,927

Total gross rises with price point — the **\$30k–\$50k** band is the profit core (avg total ~\$4,200–\$4,500). The **\$20k–\$30k** band is the danger zone: thin front (\$552) on newer, low-mile units (these are the auction late-models that sit). Cheaper **sub-\$20k** high-mileage trades actually hold the best *front* gross (\$2,162).

Units that beat the store average total gross (\$4,051)

Vehicle	Source	Front	Back	Total	Days
2025 Toyota 4Runner	Trade	\$9,730	\$9,984	\$19,713	7
2024 Toyota Sequoia	Auction	\$6,461	\$11,334	\$17,795	18
2024 Toyota 4Runner	Auction	\$3,429	\$10,887	\$14,316	18
2025 Toyota RAV4	Auction	\$1,509	\$10,736	\$12,245	10
2025 Toyota Camry	Trade	\$4,625	\$7,530	\$12,155	1
2021 Toyota Sienna	Trade	\$4,645	\$6,737	\$11,381	8
2011 Toyota Camry	Unknown	\$10,720	\$0	\$10,720	0
2025 Toyota RAV4	Auction	\$57	\$10,464	\$10,522	54
2025 Chevrolet Colorado	Trade	\$4,113	\$6,376	\$10,489	67
2025 Toyota RAV4	Auction	\$1,352	\$8,858	\$10,210	78
2024 Cadillac CT4	Trade	\$3,222	\$6,729	\$9,951	39
2023 Chevrolet Blazer	Trade	\$1,405	\$8,246	\$9,651	59

53 of 122 units beat the store average (top 12 shown).

Negative front-gross deals — common traits

Source	# Deals	Avg Front	Avg Days	Avg Model Yr
Auction / Wholesale	25	-\$1,714	47	2024
Trade-In	7	-\$1,351	53	2022
All negative-front	32	-\$1,634	49	2024

Common traits: 32 of 122 sold units (26%) lost money up front. **78% were auction buys.** They skew late-model (avg MY 2024) and age on the lot (49 days avg — well past the 21-day fast line). Concentration: Camry (8), Highlander (6), RAV4 (6), Odyssey (2), Palisade (2). Translation: we are overpaying at auction for newer Camry/Highlander/RAV4 and grinding the front to zero to move them.

REPORT 3 — CURRENT INVENTORY HEALTH

Days supply & sell-through by model (Toyota)

Days supply = current units in stock ÷ daily sales rate (units sold last 30 ÷ 30). Bands: <30 = **THIN (buy more)**, 30–60 = healthy, 60–90 = heavy, 90+ = overstocked. Sell-through = sold ÷ (sold + in stock).

Model	Sold 30d	In Stock	Days Supply	Sell-Through	Status
Prius	4	0	0	100%	THIN — buy
Crown	3	1	10	75%	THIN — buy
4Runner	5	2	12	71%	THIN — buy
Tacoma	8	5	19	62%	THIN — buy
Camry	19	13	21	59%	THIN — buy
RAV4	17	13	23	57%	THIN — buy
Highlander	11	9	25	55%	THIN — buy
Sienna	4	6	45	40%	Healthy
Corolla	4	7	52	36%	Healthy
Sequoia	1	2	60	33%	Heavy
GR86	0	1	∞	0%	Dead (no sales)
Grand Highlander	0	5	∞	0%	Dead (no sales)
Land Cruiser	0	2	∞	0%	Dead (no sales)
Tundra	0	7	∞	0%	Dead (no sales)
Venza	0	1	∞	0%	Dead (no sales)

Read: our entire fast-selling core (4Runner, Tacoma, Camry, RAV4, Highlander, Prius, Crown) is THIN — we are selling faster than we're stocking. Meanwhile **Tundra (7 in stock, 0 sold)**, **Grand Highlander (5)**, **Land Cruiser (2)**, **Sequoia** and **Corolla** are heavy or dead. Reallocate auction spend from trucks-that-sit toward the thin core.

Aged unit flags — every current unit over 60 days

Vehicle	Days	Asking	Cost	Odometer	Source*
2025 Toyota Highlander LE	73	\$44,100	\$42,930	34,771	Auction*
2024 Toyota Tundra SR5	66	\$44,010	\$43,837	24,074	Auction*
2024 Toyota Tacoma TRD Off-Road	66	\$40,625	\$40,250	32,756	Auction*
2023 Ford F-150 XLT	64	\$42,370	\$42,463	23,085	Auction*
2025 Toyota Camry SE	63	\$30,374	\$30,460	44,904	Auction*
2025 Toyota RAV4 XLE	63	\$33,999	\$33,613	32,280	Auction*
2025 Toyota Camry LE	63	\$27,974	\$27,375	42,164	Auction*
TOTAL — 7 aged units		\$263,452	\$260,928		

*Source inferred (no sales appraiser on record → auction/wholesale). **\$260,928 of capital (\$263,452 retail) is locked in these 7 units.** All are late-model and were bought at thin markups (asking barely above cost) — classic auction over-pays. Priority: price-to-market and move before 90 days.

BUYER'S TARGET LIST — what to chase

Ranked buy list: fast movers + above-average gross + thin in stock

Ideal acquisition price = actual median sold retail – target front gross (preferred source). Preferred source is whichever grossed better on the sold data.

#	Year/Make/Model	Ideal Acq. Price	Avg Days	Avg Front	Avg Total	Pref. Source	Days Supply
1	Toyota 4Runner	\$35,345–\$36,976	13	\$5,035	\$9,768	Trade	12
2	Toyota Sienna	\$33,507–\$34,732	14	\$3,800	\$7,327	Trade	45
3	Toyota Tacoma	\$33,337–\$34,142	34	\$2,442	\$4,068	Trade	19
4	Toyota Camry	\$23,975–\$24,661	35	\$1,068	\$4,318	Trade	21
5	Toyota Prius	\$24,382–\$25,041	14	\$2,301	\$3,256	Trade	0

How to read the buy list: these are model-level averages; *preferred source* is the channel that has delivered the better front gross. **#1 4Runner** is the standout — fastest turn and richest gross in the store, and we're nearly out. **Sienna** posts the #2 gross and trades flip in ~6 days (model stock reads 'healthy' only because volume is low — buy every clean one). **Tacoma, Camry and Prius** are all thin; the catch is **source**: trade Camrys gross \$5,125 in 21 days while auction Camrys grind to \$3,630 over 42 days. Prioritize trade acquisition on these.

DO NOT BUY / slow down

Target	Why	Detail
Auction Highlanders	Weak gross + slow	6 units · -\$2,413 front · \$2,229 total · 46 days. Worst money-loser in the store.
Auction RAV4s	Margin-thin	15 units · -\$129 front · \$3,348 total · 37 days. High volume, near-zero front; back-end carries it.
Auction Camrys	Slow + flat front	14 units · \$31 front · 42 days. Buy Camrys on TRADE, not auction.
Tundra (in stock)	Overstocked / dead	7 in stock, 0 sold in 30 days. Stop adding full-size trucks until these move.
Grand Highlander / Land Cruiser	Dead stock	5 + 2 units in stock, zero sales in 30 days. No proven turn — avoid speculative buys.
Corolla / Sequoia	Heavy + low gross	Days supply 52 / 60. Corolla gross only \$2,969. Adequately stocked — no urgency.

The pattern is the source, not the model. The same nameplates that make money on trade (Highlander, RAV4, Camry) lose money at auction. Our auction desk is paying retail-minus-nothing for late-model units, then bleeding front gross as they age. Shift the mix toward trade and toward the thin core above.

Methodology & data notes

- Sources: "sold units – 30 days" (126 sold records) and "current inventory 6-4" (126 in-stock units).
- Days-to-sell uses the sold feed's Vehicle Age (days in inventory). 4 outliers with front gross beyond ±\$15k (a +\$52.6k Sienna, two +\$20k Camrys, and a –\$33.4k RAV4) are excluded from all averages as data-entry anomalies; counts include them.
- Mileage, retail sale price, and acquisition source now come directly from the sold feed (actuals, not proxies). Price bands use real retail price; the mileage analysis uses actual sold odometer; buy-list acquisition prices anchor on each model's median actual sold retail minus the target front gross. A few sold records with a blank/\$0 retail price are excluded from price-band and acquisition math only.
- Current-inventory acquisition source is INFERRED (a recorded sales appraiser → trade; otherwise auction/wholesale) because the inventory feed has no explicit source field. Sold-unit source uses the feed's Source Type and is exact.
- Model groupings normalize trims to the base nameplate (e.g., Camry XSE → Camry, Tacoma 4WD → Tacoma).
